

“THIS DRUG SUCKS”

**PRODUCT L provided severe pain patients relief.
Abusers did not like it as much.**

PRODUCT L is the only oxycodone with sequestered naltrexone that has demonstrated decreased “drug liking” and “drug high” scores in nondependent recreational drug users when the product was crushed and administered via the oral and intranasal routes. While abuse is still possible, PRODUCT L is specifically built with properties expected to reduce abuse.

PRODUCT L
LESS PAIN. LESS LIKED.

A close-up portrait of an elderly woman with short, curly, light-colored hair. She has a serious, almost somber expression, looking directly at the camera. Her skin shows signs of aging, with visible wrinkles and lines. The background is dark and out of focus.

SEVERE PAIN PATIENT OR OPIOID ABUSER?

PRODUCT L CAN HELP ADDRESS BOTH. IT OFFERS RELIEF FOR CHRONIC PAIN WITH PROPERTIES EXPECTED TO REDUCE ABUSE.

PRODUCT L is the only oxycodone built with the abuse deterrent technology of sequestered naltrexone. While PRODUCT L won't stop all forms of abuse, it offers pain relief for patients in need with properties expected to reduce abuse via the oral and intranasal routes when the product is manipulated.
